

Step by Step Installation Guide - CHANNEL DRAINAGE

- 1**
- ✓ Dig trench for **FloDrain**, allowing for 50mm deep compacted sand base and wide enough for a minimum of 100mm backfill of concrete on each side.

- 2**
- ✓ Fix a string line to finishing height of grate 2mm below final surface level.
 - ✓ Allow a fall approx. 5mm for every 1m length (1:200).

- 3**
- ✓ Start installation at lowest point of the run to accommodate any cut lengths which should be installed at the point furthest from the outlet.

- 4**
- ✓ Join two lengths of channel by interlocking them at each end.

- 5**
- ✓ Use an End Cap at highest point of FloDrain.

It is advisable to use silicone sealant for the FloDrain joints & end caps.

- 6**
- ✓ Connect the lowest end of FloDrain to 110mm PVC-U BS EN1401 drainage pipe using either an end outlet or the preformed channel bottom outlet to allow water to drain away.

Contact **FloPlast** with regards to all other connections than stated above.

FloDrain can be cut to size using a hacksaw.

Step by Step Installation Guide - CHANNEL DRAINAGE

- ✓ Install with grate.

- ✓ Protect grate with tape before concrete is poured.

- ✓ Pour concrete and finish 2mm above level of grate.
- ✓ Allow 72 hours to cure before vehicle use or removing grates.

- ✓ Insert a screwdriver into the slots provided, twist and lift to remove the grate.

- ✓ If installing block paving or paving slabs, haunch around channel with concrete to a height which allows the depth of the block or slab to finish 2mm above the level of grate.
